

ABSTRACT

An animal registration management system which
enables the individual identification of an animal
correctly, quickly, and at a low cost using an animal
identifier. This system is an animal registration
management system which enables individual identification
of an animal by an identifier printed or recorded with an
animal registration number belonging to a predetermined
management organization, wherein when an animal breeder
registers an animal at a management organization, it
first obtains an identifier, then reports an animal
registration number included in the identifier to the
management organization together with individual
information unique to the animal which the breeder
desires to register, then the management organization
registers the reported animal registration number and the
individual information in its database and issues an
animal registration certificate linking the animal
registration number and the individual information. The
report can be made by an animal registration application
form attached to the identifier.
